

GI CROWD CONTROL BARRIER

DESCRIPTION:

Our GI Crowd Control barriers are a much stronger and more durable form of crowd control barrier, which have been designed for use in the most demanding of environments. Unlike standard crowd control barriers, these have a mesh infill as opposed to vertical bars.

USAGE:

You can use This Barrier to secure arenas, stadiums, or other venues. They can create passages for security and emergency services, making them ideal for placement between the pitch and the grandstand or at the front of stage barricades in the standing area.
